

The Baker Hill NextGen® platform and Compliance Systems, Inc. (CSi) IntelleDoc Solutions integrate seamlessly to bring you the complete, end-to-end software solution needed to effectively manage the entire loan process—from origination to closing—with greater speed, consistency, and compliance.

## Industry-leading Compliance Warranty

CSi backs each loan with one of the most comprehensive compliance warranties in the industry, providing you with the confidence of knowing each decision was made and documented with best-in-class approaches to both risk management and document preparation. In their 20+ years in business, CSi has never received a valid claim against its compliance warranty.

## Reduce Risk Exposure

Document compliance regulations are complex and vary by state, necessitating maximum flexibility and accuracy for banks and credit unions to remain competitive and capture a larger share of business. The Baker Hill NextGen® platform and IntelleDoc work together to ensure each document adheres to federal and state-specific compliance regulations by automatically assembling the correct forms for a given transaction, reducing your financial institutions' risk exposure for virtually any type of loan.

## Ongoing Compliance Analysis

IntelleDoc conducts ongoing compliance analysis throughout the transaction, reducing the risk of exposure. This ongoing review by CSi mitigates the variable regulatory landscape and the potential for errors among inexperienced staff members at your institution.

## Eliminate Third-Party Solutions for Closing Documentation

The seamless integration of Baker Hill NextGen® Loan Origination and IntelleDoc solutions eliminates the need for costly third-party products for closing documentation, providing the true end-to-end software solution needed to close a loan efficiently and without risk.
